QUICK START

30-minute workout at machine standard settings

Description
The best way to get moving is to press Quick Start and go! The program defaults to standard settings which you can change with the press of a button (+ / -) at any time.

Note: On the MTX, only the resistance (Level) may be changed, using the resistance lever.

WALK

Stride 22” (56 cm), Incline 1 (XT-One), Level 1

Description
Get on and go for a walk; your stride length is a moderate 22” (61cm), and the incline is 1. Consistent resistance gives you a steady, even simulated walk. Press this button any time during a workout to quickly change to these settings without resetting your workout time, calories, distance or other data. Use all the Quick Start buttons to easily create a challenging interval workout, right at your fingertips!

**RUN**

Stride 28” (71 cm) , Incline 1 (XT-One), Level 1

**Quick Start Run**

**Description**
Stretch out your legs in a simulated run with a longer stride length of 28” (71 cm) and incline 1. Consistent resistance gives you a steady feel. Press this button any time during a workout to quickly change to these settings without resetting your workout time, calories, distance or other data. Use all the Quick Start buttons to easily create a challenging interval workout, right at your fingertips!

XTONE  XT4700
HIKE

Stride 24” (61 cm), Incline 5

Quick Start Hike

Description
Increase your challenge by adding some incline. With a moderate stride length of 24” (61cm) and an incline of 5, you’ll feel like you are hiking a moderately steep path. Consistent resistance gives you that slow and steady uphill effort. Press this button any time during a workout to quickly change to these settings without resetting your workout time, calories, distance or other data. Use all the Quick Start buttons to easily create a challenging interval workout, right at your fingertips!

XTONE
CLIMB

Stride 28" (71 cm), Incline 10

Description
Take on the mountain! Lengthen your stride (28" / 71cm) and bump up the incline to 10 and feel the burn in your quads in this simulated climb. Consistent resistance keeps the challenge going. Press this button any time during a workout to quickly change to these settings without resetting your workout time, calories, distance or other data. Use all the Quick Start buttons to easily create a challenging interval workout, right at your fingertips!

Product Availability

XT4700
Quick Start Narrow

Description
Work out on the LateralX with a motion similar to a traditional elliptical. With a Lateral Width of 1, this workout will feel familiar! Press this button any time during a workout to quickly change to these settings without resetting your workout time, calories, distance or other data. Use all three Quick Start buttons on the LX8000 to alternate your motion between narrow, medium and wide to really give all those leg muscles a workout!

XT4700   XT3700   MT8000
Description
Complete a virtual race—a great way to train for an actual event. Take to the hills as gradual resistance changes simulate variance in terrain, replicating the challenges encountered when walking, running or riding outside. The distance readout counts down from 6.2 miles (10 kilometers). Use Level + / - to adjust interval resistance mid-workout.

On the Zero Runner, the distance goal program mimics running on a flat terrain, without resistance changes to simulate hills. However, you can use the resistance lever to manually change resistance throughout your run if desired.

HEART RATE HILL

Description
Get a great interval workout with this controlled simulated climb of increasingly steeper hills at 65%, 75%, and 85% of theoretical maximum heart rate (or user-specified target heart rate). Each hill lasts two minutes once the target heart rate has been reached. After the biggest hill, recover until your heart rate drops back to 65%, then begin the climb again. Use Level+ / - to adjust interval target heart rates mid-workout.

WARNING! Consult a physician before you start an exercise program. Stop exercising if you feel pain or tightness in your chest, become short of breath, or feel faint. Contact your doctor before you use the machine again. Use the values calculated or measured by the machine’s computer for reference purposes only. The heart rate displayed on the console is an approximation and should be used for reference only.

HEART RATE SPEED INTERVAL

Description
Focus on power and speed in this controlled workout that alternates one-minute intervals of 65% and 85% of theoretical maximum heart rate (or user-specified target heart rate). This challenging workout combines steeper (higher resistance) intervals with changing speeds. Intervals last one minute after the target heart rate has been reached. Use Level+ / - to adjust interval target heart rates mid-workout.

WARNING! Consult a physician before you start an exercise program. Stop exercising if you feel pain or tightness in your chest, become short of breath, or feel faint. Contact your doctor before you use the machine again. Use the values calculated or measured by the machine’s computer for reference purposes only. The heart rate displayed on the console is an approximation and should be used for reference only.

## 30:30 HILLS

**Description**

Test your mettle through sets of five 30-second sprint and recovery intervals. Sprint intervals are at a higher resistance than recovery intervals, and incline increases with each set. Between sets, heart rate data is evaluated to give you a measure of how quickly your heart rate recovers between sprints. A higher number indicates a more rapid heart rate recovery and represents a relatively better level of fitness. Choose from one of three intensity levels to make this a real challenge and watch your fitness improve over time!

**WARNING!** Consult a physician before you start an exercise program. Stop exercising if you feel pain or tightness in your chest, become short of breath, or feel faint. Contact your doctor before you use the machine again. Use the values calculated or measured by the machine’s computer for reference purposes only. The heart rate displayed on the console is an approximation and should be used for reference only.

SMART Stride

**Description**
Mimic your natural movement with this innovative, Octane-exclusive program. When you select Smart Stride, the program analyzes your speed as you move in a forward stride at a pace that is comfortable for you. Then, as you continue your workout, the program intuitively makes the appropriate adjustments as your pace or direction changes.

**Description**
Build strength with this simulated climb up 3 increasingly steeper hills. You set the level of the middle hill; the smallest hill is 5 resistance levels less than the middle hill, and the biggest hill is 4 levels higher. Each hill lasts two minutes with a 30-second recovery in between. After the biggest hill, recover for 30 seconds, then begin your climb again. Use Level+ / - to adjust resistance mid-workout.

CALORIE BURN PROGRAMS: 250 CALORIES, 500 CALORIES

Description
The Zero Runner smart console offers two preset programs with specific calorie burn goals: 250 calories or 500 calories. Select the program for the calorie goal you want, enter your age and weight, and get going! If you choose, use the resistance lever throughout your workout to vary the intensity; the higher the resistance, the faster you will reach your goal!

POWERWALK

Description
This interesting program combines high resistance/short stride and lower resistance/long stride intervals in order to closely simulate the feel of hiking uphill and downhill. Each interval is two minutes long. The low resistance/long stride interval is great for lower-body full range of motion. The high resistance short stride session decreases leg activity while putting intense strength-building requirements on the upper body.

DUAL DIRECTION

Description
Add variety and interest as you alternate two-minute intervals of forward and reverse motion. The forward motion incorporates higher resistance and a longer stride or greater lateral width; in reverse you work with 4 levels lower resistance and a shorter or narrower motion. At the forward level standard value of 5 (or any level value less than 5), your reverse level is 1. Feel the difference in your glutes and quads!

XTONE  XT4700  XT3700  LX8000  MT8000  XR6000  XR6000s
Description
This challenging program provides a simple test of fitness level with 5 sets of 30-second sprint and recovery intervals. For each set, the program monitors heart rate and calculates the average minimum and average maximum heart rates and the average number of beats the heart rate recovers between sprint intervals. Heart rate recovery is a relative indicator of fitness level; a higher number indicates a more rapid heart rate recovery and therefore represents a relatively better level of fitness.

WARNING! Consult a physician before you start an exercise program. Stop exercising if you feel pain or tightness in your chest, become short of breath, or feel faint. Contact your doctor before you use the machine again. Use the values calculated or measured by the machine’s computer for reference purposes only. The heart rate displayed on the console is an approximation and should be used for reference only.

**CONSTANT WATTS**

Slower User Speed = Higher Resistance  
Faster User Speed = Lower Resistance

3-Minute warm-up  
Cool-down

**Description**
Set a target power output and let the machine keep you there by varying resistance level relative to your speed. Power output is measured in watts, representing the amount of power required by the machine to maintain the workload (pedal resistance and speed) that you want to experience. The higher the watts, the more difficult the workout.

CONSTANT METS

**Description**
Gauge the intensity of your workout by setting a target output measured in metabolic equivalent units (METs). The machine keeps you on goal by varying resistance level relative to speed. METs are a measure of power output, representing the ratio of a person’s working metabolic rate relative to that person’s resting metabolic rate. One MET is approximately equal to 1 kilocalorie burned per kilogram per hour. The greater the METs, the harder the workout.

HIGH INTENSITY INTERVAL TRAINING (HIIT) BOOSTERS

Octane Fitness products (excluding the Zero Runner, MTX and MT8000) offer high-intensity interval training ‘boosters’ to add motivation and variety to your workout. The available boosters vary by product, but all are uniquely designed to challenge, motivate, and inspire you to get the most out of your workouts.

Boosters may be enabled with any Quick Start or when using any of these programs:

- Manual
- Distance
- Calorie
- Random
- Smart Stride

To activate a HIIT Booster during any workout, simply press the button of the booster you want and its sequence begins. To deactivate, press the booster button a second time.

When a booster interval is active, the level of resistance can be changed by pressing any (+) or (−) button on the console.
X-Mode

Fast
- Push Arms
- Pull Arms
- Legs Only
- Lean Back
- Slow
- Reverse

Description
This great motivational tool keeps your workout fresh and exciting in any program. Activate X-Mode by pressing X-Mode on your console; then, every other minute X-Mode kicks in, adding four levels of resistance and prompting you to perform combinations of eight different challenges.

Fast
Pick up the pace—we recommend 50-60 rpm, but you should find your own comfort level.

Reverse
Pedal backwards to change the muscle focus on your entire lower body.

Legs Only
Either hold the stationary handlebars or naturally swing your arms.

Push Arms (XT Series, XR6000)
Focus on pushing with your arms to work your chest and triceps.

Pull Arms (XT Series, XR6000)
Focus on pulling with your arms to work your biceps and lats.

Squat (XT Series, LX8000)
Bend slightly at the knees as you pedal. You’ll feel this one in your quadriceps and glutes in no time!

Lean Back (XT Series)
Grab the stationary handlebars and lean slightly backwards. This changes the muscle focus to your lower body. You will feel this in your quadriceps.

Slow (XT Series)
Slow down to 30-40 rpm to allow yourself to recover.

Resistance+ (xR6000)
Sweat it out as you work your entire body with a quick burst at 3 additional levels of resistance—a total of 7 levels higher than your program resistance level!

Narrow Grip (xR6000)
Grasp the multigrip handlebars on the low inside edge to give your triceps and chest muscles a workout.

Wide Grip (xR6000)
Grasp the multigrip handlebars high on the outside and feel it in your shoulders, chest, and back.

Shift Body (LX8000)
Shift your whole body side to side with the lateral motion.

Center Body (LX8000)
Keep your core centered and steady as your lower body shifts with the lateral motion.

Push / Pull+ (LX8000)
Focus on pushing and pulling with your arms at an increased resistance level to work your chest, biceps, lats and triceps.

ArmBlaster / Chest Press

Description
ArmBlaster (called Chest Press on the xR6000) is a proprietary program designed to boost cardiovascular endurance while building strength and muscle tone. ArmBlaster adds upper-body strength sessions to the cardio program profile that you have selected. Press or on your console to start a session; then, every minute, resistance increases 10 levels (6 levels for Chest Press) for a muscle-building, 10-repetition set as you transfer the workload from your lower body to your upper body, concentrating on pushing and pulling with your arms. On the xR6000, take advantage of your seated position by placing your feet on the stationary footpegs to really isolate those arms!

Product Availability

XTONE  XT4700  XT3700
XR6000  XR6000s
Description
GluteKicker is an aggressive subset of X-Mode that is focused on your glutes, hips, and thighs. It uses four prompts: Reverse, Squat, Fast, and Lean Back. GluteKicker sessions last for one minute, with a one-minute recovery period. Press on your console to start a session; then, every minute, place your hands on the stationary handlebars for a muscle-building power 30-second set as you transfer the workload to the lower body.

Product Availability
XT3700
Description
Challenge your glutes with this workout booster that pushes back! Press GlutePower button during any workout, then increase your speed. The faster you go, the greater the resistance (level) and the steeper the incline. Slow down again and the resistance decreases and the incline lessens. Race up and down those ‘hills’ and feel the burn!

Product Availability

GlutePower
**Leg Press**

**Description**
Leg Press adds an aggressive routine to help you build strength and power in your leg muscles to the cardio program profile that you have selected. Press the **Leg Press** button on your console to start a session; then, every minute, resistance increases 8 levels for a muscle-building, 15-repetition set as you place your hands on the stationary handlebars and transfer the workload to the lower body.

**Product Availability**

**XR6000**  **XR6000s**
**QuadPower**

**Description**
Challenge your quads and glutes with this workout booster that pushes back! Press during any workout, then increase your speed. The faster you go, the greater the resistance (level) and the wider the lateral motion (lateral width). Slow down again and the resistance decreases and the lateral width narrows. You are in control as the lateral cross trainer responds to really work those legs!

*LX8000*
SmartStride

Description
SmartStride automatically replicates natural movement by analyzing and measuring your pace and direction and intuitively adjusting stride length in 1-inch (2-centimeter) increments from 20 inches (51 cm) to 28 inches (671 cm). Press and the machine will analyze your speed and make the appropriate adjustments as your pace or direction changes.

Product Availability
XT4700
**Description**

ThighToner uses varying lateral widths to firm and tone your thighs. Press the ThighToner button during any program, then increase your speed. The faster you go, the greater the wider the lateral motion. Slow down again and the lateral width narrows.

OCTANE PRODUCT FEATURES

Octane Fitness products incorporate additional features to ensure that you experience great workouts. Learn more and take advantage of many great features.

Heart Rate Monitoring and HeartLogic Intelligence

Octane products are equipped with state-of-the-art heart rate monitoring and control technologies that help you make the most of your training efforts. All models include on-demand heart rate monitoring—just grasp the digital contact heart rate grip sensors on the handlebars and your current heart rate is displayed on the console.

**WARNING!** Use the values calculated or measure by the machine’s computer for reference purposes only. The heart rate displayed is an approximation and should be used for reference only. Over-exercising may result in serious injury or death. If you feel faint, stop exercising immediately.

For even greater control of your workout, Octane Fitness products are also equipped with HeartLogic Intelligence, a sophisticated yet easy to use heart rate control technology. This sophisticated solution provides the most accurate and effective workout using heart rate data captured by a wireless chest strap or the digital contact heart rate grip sensors on the handlebars.

- **Using the digital contact heart rate sensors** (not available on MTX)
  - Digital contact heart rate sensors are located on the handlebars. The grips can be used to check your heart rate during your workout. For the most accurate heart rate reading, grasp each contact heart rate grip so that the contact sensor portion of the grip rests in the palm of your hand. Grip the contact sensors firmly, and keep your hands steady and in place.

- **Using a wireless chest strap**
  - You may use any Polar™-compatible (5 KHz, coded or non-coded) transmitter to transmit your heart rate to the electronics console at a distance of up to three feet. Adjust the length of the elastic strap and fasten the transmitter around your torso, underneath your shirt. Place the strap just below your chest. It may help to moisten the electrodes on the back of the transmitter with a small amount of water for better contact with the skin. The electrodes are the ribbed portion on the back side of the transmitter that sits against your skin. Make sure the strap fits snugly but doesn’t restrict breathing. The contact handgrips reading takes priority if both the wireless and contact heart rate grips are in use.

- **Using an ANT+ heart rate monitor**
  - To connect your ANT+ monitor to your product, stand close to the Octane console while wearing your monitor until the ANT+ icon in the upper right corner of the console illuminates. This indicates that your device is connected and you may then proceed with your workout.

- **Heart rate programs**
  - Octane products (excluding the Zero Runner, MTX and MT8000) offer several heart rate controlled programs, giving you more variety to suit your personal needs. The 30:30 program, available on all Octane products, also uses heart rate data to provide an assessment of heart rate recovery. We recommend that you try different programs to determine your favorite. Refer to the Program descriptions for more information.
MultiGrip™ Handlebars and Fingertip Controls

Your Octane Fitness product may feature one-of-a-kind handlebars that deliver the ultimate upper-body workout with virtually unlimited options for maximum comfort, customization, and effectiveness. The unique MultiGrip handlebars with converging motion are only offered by Octane, and these innovative handlebars have revolutionized how you workout your upper-body. The MultiGrip handlebars are comfortable in any position, whether you’re hanging on loosely for a brief, easy workout, or gripping the MultiGrip handlebars tightly to complete a lengthy, heart-pumping, high-intensity workout session.

The converging motion and unique design of the MultiGrip handlebars fit every exerciser—tall, short, slender, bigger framed, and even those with shorter or longer arms—providing a multitude of choices that result in the most comfortable and ergonomically correct positions of any cross trainer. You will feel the difference! Here’s how they can be put to work for you:

| Zone 1 | Top horizontal position | Ideal for pushing | Gives longer range of motion | Engages the deltoid (shoulder) and lat (back) muscles |
| Zone 2 | Large corner position | Push with the palms; better stability for a excellent chest press motion | Focuses more on using the pectoral (chest) muscles |
| Zone 3 | Wide grip | Emphasizes pectoral (chest) and lat (back) muscles |
| Zone 4 | Low inside position | Shorter range of motion | Suitable for lighter workouts with less upper-body involvement | Great position for squatting down and pedaling in reverse | Simulates runners movement or when moving fast |
| Zone 5 | Narrow vertical position | Great for pulling or pushing of the arms | Focuses on the lat (back), triceps (back of arm), and biceps (front of arm) muscles |

No matter what position or zone you select, you’re working numerous different muscle groups throughout your upper-body to get a true cross training workout. You can emphasize either a push or pull movement or reposition your hands any time during any program for maximal muscle exertion, balance, variety, and comfort.

Fingertip Controls

The handlebar may also feature fingertip control buttons. These convenient buttons let you adjust settings to meet your needs without breaking the flow of the workout. Button functions vary by product, as outlined below:

XT ONE  XT4700  XT3700  LX8000  XR6000  XR6000s  MT8000 (Fingertip control only)
**Electronically Adjustable Stride with SmartStride™**

The **XT-One** and **XT4700** are equipped with electronically adjustable stride, providing a custom fit for your body and your workout. Adjustable stride isn’t just for fine-tuning the workout to your height — it custom fits your Octane cross trainer to your size and style and adds valuable variety.

By pressing the Stride (+/–) buttons on the console or the left moving handlebar of the XT-One, you can change the stride length from 20” (51 cm) to 28” (71 cm) in ½-inch (1 cm) increments. This added variety is great to use for different workouts, directions, warm-ups and cool-downs.

**SmartStride™**
Octane Fitness delivers an advanced, ergonomically correct and inherently better elliptical cross training workouts ever with its proprietary SmartStride.

SmartStride automatically replicates natural movement by analyzing and measuring an exerciser’s pace and direction and intuitively adjusting stride length from 20 inches (51 cm) to 28 inches (71 cm). These interactive ergonomics custom-fit the cross trainer to the exerciser for effective, comfortable, results-producing workouts unlike those on any other piece of fitness equipment.

To use SmartStride on the XT-One, select the Smart Stride program and follow the prompts. Or, press and hold the Stride (+/–) buttons on the console simultaneously for three seconds (or until you hear the beep) to add this booster to any program. On the XT4700, simply press to use this booster.

**Multi-Position Adjustable Seat (with Optional Swivel)**

The comfort and effectiveness of the workout on the **xR6000** begins with proper seat position. Both the height of the seat and the tilt of the seat back on the xR6000 and xR6000s seat are adjustable, ensuring that you can find just the right position to suit your preference and deliver the best possible workout.

*Note: When adjusting seat height or tilt, make sure you hear and feel the adjustment mechanism lock into position.*

**Adjusting seat height**
Adjust seat height on the xR6000 Series using the handle located just under the front edge of the seat. While bracing yourself with your feet on the platform, lift up on the handle and use your legs to move the seat into a comfortable height. Place your feet on the pedals and pedal forward, stopping when one pedal is at its lowest point. Check the position of your leg on this pedal; your knee should be slightly bent. If your leg is fully extended, or your knee is bent too much, readjust the seat height until you have the proper leg extension.

**Adjusting seat back tilt**
Adjust the tilt of the seat back on the xR6000 Series using the handles on either side of the seat. To adjust, lift up on one of the handles. Press back to recline or shift your weight slightly forward to tilt the seat back up. Release the handle to lock the seat back into position.

*Note: Once you have adjusted the tilt of the seat back to a comfortable position, pedal forward and recheck your leg extension. You may need to readjust the seat height to compensate for the change in tilt.*

**Swivel Seat (xR600x only)**
The **xR6000s** offers the additional convenience of a 210-degree swiveling seat, allowing for easier entry and exit and comfortably accommodate exercisers of different abilities and ages.
**Resistance (Level) Adjustment Lever**

ZR8000, ZR7000 and MTX feature a mechanical lever just below the console that is used to adjust the resistance (Level) of your workout. On the MTX and ZR7000, the adjustment range is 1 to 10, where 1 is the least resistance and 10 is the greatest. On the ZR8000, the maximum resistance is 15.

Pushing the adjustment lever away from you increases resistance; pulling the lever toward you decreases resistance. Move the lever within its range to find the resistance that is most comfortable for you.

**Optional Kits: CROSS CiRCUIT Pro and Commercial Side Steps**

CROSS CiRCUIT Pro Kits, which include side platforms/weight stands and PowerBlocks, are available for most products. This kit gives you cardio and strength training in one place on your club floor. Several programs are specifically designed for use with these kits: CROSS CiRCUIT Solo and CROSS CiRCUIT Group on the Standard console, and four additional targeted programs for upper body, lower body, total body and core on the Smart console. Please visit [www.crosscircuit.net](http://www.crosscircuit.net) for more information about this unique Octane Fitness workout enhancer.

Also available for the XT-One, XT4700 and XT3700 are Commercial Side Steps Kits which provide platforms for users to stand on while performing arm-isolation exercises.

Please contact Octane Fitness Customer Service for pricing and ordering information.

**Optional Power Supply**

Optional power supplies are available for self-powered Octane Fitness products with standard consoles: XT4700, XT3700, PRO3700C, PRO370, LX8000, xR6000, xR6000s, XT-One, ZR8000, and MTX.

Please contact Octane Fitness Customer Service for pricing and ordering information for the power supply best suited to your product.
